Large Outdoor Housings

HS9385 & HS9386 Series

The 5.3-inch diameter HS9385 and HS9386 Large Series Outdoor Housings are designed to enclose large zoom lenses and cameras.

These housings are constructed of an extruded aluminum cover and a fabricated aluminum frame. The unique design allows adjustments to be made to the camera in its mounted position after the cover is removed. Also, an internal rail assembly rotates independently of the mounting base assembly and allows the camera to be mounted at any angle.

The housing comes equipped with an internally mounted thermostatically controlled heater. The heater design minimizes fogging of the polycarbonate window in high humidity areas or freezing under cold temperature conditions. The rear of the housing contains three liquid-tight fittings which permit pass-through of video coax, AC power, and lens control wiring. The housing is sealed with O-rings.
